DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4 and 12 are drawn to methods of reducing the glycemic index in a patient suffering from type 2 diabetes; providing nutrition to a diabetic patient; substantially reducing the blood glucose level in a person; and controls the glucose release initiated by enzymatic action, classified in class 514, subclasses 58, 59, 60 and 866.
 - II. Claims 5, 6 and 13 are drawn to methods for controlling the membrane structure of a starch granule; and for starch cell wall strengthening in a starch-containing food, classified in class 514, subclasses 58 and 60.
 - III. Claims 7-9 are drawn to a meal composition, classified in class 426, various subclasses .
 - IV. Claims 10 and 11 are drawn to a food composition and a use of the food composition, classified in class 514, subclass 775 and 866.

The four inventions are independent and distinct, each from the other as they have acquired a separate status in the art as shown by their different classification and a separate subject matter for inventive effort. Further, a reference which anticipates any one of the above inventions would neither anticipate or make obvious of the other inventions. Each such

invention is capable of supporting its own patent. For these reasons, the restriction requirement is proper.

To be complete, applicants' response must include a provisional election even though the requirement may be traverse.

The applicants are required to elect a single invention for examination purposes.
